- 2 Ball bearings on driver pulley
- 1.2" Cotton/silicone belt for ultimate oil removing performance
- 9 ft long cord 115v
- Liquid tight enclosure

Oil collecting in Keller Skimallessor Tank.

How it Works:

The Keller Black Magic Belt skimmer with the Skimallessor oil concentrator is mounted on the cover of the high pressure coolant system. As the Skimallessor container fills with coolant and oil, the oil separates to the top of the container and is held there. Coolant that separates is continuously returned from bottom of the container to the sump through internal piping. The only maintenance is draining the accumulated oil once or twice per week, depending on the machine.
